

# CAREER CHANGER: WIDENING THE TECH TALENT POOL

**SKILLS CITY**  
Fair Access to Technology Futures

**IN4.0™**  
Group

**Jing Walker**  
Digital Advisory Consultant  
UBDS

"The main thing I would say to people considering the bootcamp is don't let imposter syndrome get in the way. Without the bootcamp, I wouldn't have been introduced to UBDS. I'm confident that Skills City's tailored talent acquisition process will find you the right employer in its network, like it did for me."

**Jing Walker was a consultant in healthcare management before completing Skills City's Data Analytics Skills Bootcamp and securing a job as a Digital Advisory Consultant at UBDS.**

Jing started her career by supporting organisational change in rehab settings. Impacted by the pandemic,

she then began to consider a change in career direction and decided to explore careers in digital transformation.

## Upskilling diverse talent

Jing enrolled in the Data Analytics bootcamp to learn more about technology as an economic driver and organisational change through tech, to complement her existing skills.

She also appreciated how the bootcamp debunked tech sector myths and managed expectations by highlighting that coding is not the only skill required in the industry.

## Widening the talent pool

The bootcamp was a turning point in Jing's career, providing her with exposure to scaling companies. She was introduced to UBDS through Skills City's tailored

process, securing a job which was truly right for her. She now utilises her newly learnt skills and feels confident providing digital transformation solutions.

## Unlocking hidden potential

Jing's experience highlights the importance of having a well-rounded understanding of technology in today's economy, and how it can transform organisations.

She gained the knowledge and networks necessary to pursue a career in a tech organisation, and she is now able to use her unique background to provide valuable insights to the sector.
